

BUSHFIRE PROTECTION UPGRADE, MATCHAM HOME

Matcham Residence, NSW

SECTOR:

Bushfire Protection
(Residential)

PROJECT COMPLETION:

June 2026

ADDRESS:

Koorin Road, Matcham, NSW

PROJECT OVERVIEW:

With a growing reputation as bushfire protection specialists, Bowers was engaged to deliver a BAL-FZ bushfire protection upgrade for a residential dwelling in the bushfire-prone suburb of Matcham. The project required a comprehensive solution to achieve a Bushfire Attack Level – Flame Zone (BAL-FZ) rating, the highest level of bushfire protection under Australian Standards.

SERVICES OFFERED:

Bowers installed the **Siniat Weather Defence 2 (WD2)** bushfire protection system across key areas of the property to meet BAL-FZ requirements. The scope included the installation of approximately 420m² of WD2 to the roof structure, along with protection upgrades to the eaves and fascia and protection works to the porch and external deck areas. Bowers managed and coordinated all installation activities to ensure full compliance with bushfire protection standards.

PROJECT CHALLENGES:

As with many external construction projects, weather conditions presented a significant challenge throughout the installation program.

SOLUTIONS OFFERED:

To maintain progress, the Bowers team implemented a flexible delivery approach, adjusting installation schedules to maximise suitable weather windows and staging works to minimise disruption.

OVERALL OUTCOME:

Our adaptive approach enabled the project to progress safely while minimising delays. The completed works have helped safeguard the home against one of Australia's most severe environmental risks while providing long-term peace of mind for the property owner.
